

Oven to Air Fryer Conversion Chart

Free printable reference — airfryerconvert.com

Oven Temp	Air Fryer Temp	Time Adjustment
300°F (149°C)	275°F (135°C)	Reduce time by 20%
325°F (163°C)	300°F (149°C)	Reduce time by 20%
350°F (177°C)	325°F (163°C)	Reduce time by 20%
375°F (191°C)	350°F (177°C)	Reduce time by 20%
400°F (204°C)	375°F (191°C)	Reduce time by 20%
425°F (218°C)	400°F (204°C)	Reduce time by 20%
450°F (232°C)	425°F (218°C)	Reduce time by 20%

Ninja Air Fryer Ovens

Ninja Foodi and Ninja air fryer ovens with a dedicated "Air Fry" or "Air Crisp" setting use the same conversion as above — set the appliance to the converted temperature and check 5–10 minutes before the converted time is up. Models without a bake mode preset should use the air fryer temperature column directly.

The General Rule

Lower the oven temperature by 25°F (about 15°C) and cut the cooking time by roughly 20%. Air fryers circulate hot air directly around food, so they cook faster and at a lower effective temperature than a conventional oven bake. Always check for doneness a few minutes early, especially the first time you cook a recipe this way.
